A WORKING SCORECARD

OCT 2026

# The *AI Workflow Readiness* Scorecard

*Twenty minutes, five of your own workflows, one spreadsheet. You finish with a ranked shortlist: which workflow to build AI into first, which needs a person reviewing the output, and which to leave alone because the problem is the process, not the tooling.*

## STEP 1. PICK FIVE WORKFLOWS *real ones, the way they actually run today*

- [ ] **It repeats.**
  *It happened last week and it will happen next week. One-off projects do not belong on this sheet.*
- [ ] **You can name the input and the output.**
  *"A supplier email becomes an updated order" is scoreable. "Operations" is not. Split it until it is.*
- [ ] **Someone complains about it.**
  *Ask the people doing it what they copy, paste, retype or chase every day. Their answer beats the process document.*
- [ ] **Spread them across teams.**
  *Five from one team tells you about one team. One each from sales, finance, ops, support and admin tells you where to start.*

## STEP 2. SCORE EACH ONE 1 TO 5 *yellow columns in the sheet, whole numbers only*

| | REPETITIVENESS | VOLUME | TEXT INTENSITY |
|---|---|---|---|
| 5 | Daily | 100+ a day | Full documents |
| 4 | Multiple times a week | 10 to 99 a day | Summaries or reports |
| 3 | Weekly | 1 to 9 a day | Structured data plus text |
| 2 | Every two weeks | Multiple times a week | Semi-structured |
| 1 | Monthly | Under 5 a week | Pure forms |

**Score = Repetitiveness × Volume × Text intensity**, out of 125. The sheet does the multiplying. Between two numbers, pick the lower one: an honest 3 beats a hopeful 4. Because it is a product, one weak factor drags the score down: a single 1 caps it at 25.

## STEP 3. READ THE VERDICT *then sort the sheet by Score, highest first*

60 AND ABOVE

### Build

A strong AI candidate: it repeats often, at volume, on text. Start with the highest score here.

30 TO 59

### Human in loop

Worth doing if a person reviews the output before it goes anywhere. Design that review step first.

BELOW 30

### Skip

Low on frequency, volume or text, so AI is unlikely to pay off here yet. Check whether the process itself needs simplifying before you automate any of it.

**NEXT STEP**

Got a Build at the top of your list? This sheet ranks by how often a workflow runs and how much text it handles. It does not measure return. The USD 497 AI Workflow Audit does: your top three opportunities, each with projected hours saved and an ROI projection, plus one thing to stop doing, in a one-page report and a 30-minute readout. **Book a free 20-minute fit call**, bring your scored sheet, and we will check whether the audit is worth it for you before you spend anything.
